

## Springtime

The days are getting longer. The weather is getting warmer. Snow and ice are melting. Spring is here! What happens in spring?

In spring, farmers plant crops. They plant seeds in the ground. They plant corn. They plant rice. The seeds grow in the warm sun.

In spring, the flowers bloom. Daffodils and tulips bloom in people's gardens. Cherry blossoms bloom in the cherry blossom trees. The cherry blossoms fall to the ground like snow.

In spring, the animals return. Birds return from warm places. Insects come out of the ground. Bears wake up. Frogs wake up. In spring, the whole world wakes up!
